

NEW MAGNET SWITCH OPERATION

This Solar Light Features Lake Lites new advanced magnet switch technology!

This advanced feature allows you to easily change the brightness level without opening the light fixture. You can easily adjust the brightness and run times to meet seasonal performance expectations and personal lighting requirements.

Setting the Brightness Level

1. Wave the magnet over the solar panel until you find the exact area in which the magnet activates a change in the brightness level.
2. Now, make a quick up & down motion over this area to set the brightness to the desired level.

NOTE: *moving too slowly may activate the magnet switch multiple times going through multiple levels at once. A quick motion will help!*
