

# Recommended Winter Storage for Solar Charging Systems & Motors

For longest service life:  
Fully lower lift cradle, remove motor,  
then store indoors.

Remove solar panel & wiring for  
winter. Winter is harsh on the  
wires when left exposed.  
If replacement wiring is needed,  
check out our website.

If leaving motor on lift, DO NOT cover  
with a trash bag or plastic. Use the Lift  
Tech Winter Nylon Cover available on  
our website.

Remove batteries & store inside for  
longest service life. Charge battery  
before storing & charge battery before  
reinstalling back on lift.

## Below are recommendations for winter if you choose NOT to store them indoors:

**Solar Panels:** Recommended a Solar Charge Regulator be integrated to prevent over charging batteries while constantly charging.

**Batteries:** Placing/storing batteries in battery boxes protect the battery from harsh elements allowing batteries to be CONSTANTLY charged.

**Motors:** Lift Tech's Motor Enclosure is recommended for the motor while mounted to the lift, protecting it from the harsh elements and offering a pleasing aesthetic look.
